Home Quarantine Instructions for Close Contacts to COVID-19

SUMMARY
In Los Angeles County, if you have been in close contact with a person diagnosed with COVID-19 you are required* to:

1. Quarantine - stay home and separate yourself from others for 10 days
2. Monitor your health for 14 days
3. Follow the Health Officer Quarantine Order along with the steps below

It is recommended that you get tested** for COVID-19.

*If you have been fully vaccinated for COVID-19 and have been exposed to someone with COVID-19, you may not need to quarantine – See People who have been fully vaccinated below for details.

**If you have had COVID-19 with a positive viral (swab or saliva) test in the last 90 days, talk with your doctor about the need to quarantine. **In addition, as long as you do not have symptoms, you do not need to get another test for COVID-19. If you do have symptoms of COVID-19, talk to your doctor.

Please help slow the spread of COVID-19. Answer your phone if you get a call from “LA PublicHealth” or 1-833-641-0305 (see Contact Tracing).

Recent travel: if you entered LA County from outside of California, you need to self-quarantine for 10 days after you arrive and must limit your interactions to people with whom you live. See the latest Travel Advisory and Guidance for further instructions.

QUARANTINE

Quarantine is used to keep someone who might have been exposed to COVID-19 away from others. Quarantine helps prevent spread of disease before a person knows they are sick or if they are infected with the virus without feeling symptoms. You need to quarantine if you are a close contact to someone who has COVID-19.

What is a Close Contact?
You are a "close contact" if:

a. You were within 6 feet of someone with COVID-19 for a total of 15 minutes or more over a 24-hour period.

b. You had unprotected contact with the body fluids and/or secretions from someone with COVID-19. For example, you were coughed or sneezed on, you shared a drinking cup or eating utensils, you kissed, or you provided care to them without wearing the right protective equipment.

*A person with COVID-19 can infect others from 2 days before their symptoms first started until they are allowed to end their home isolation (as described in Home Isolation Instructions). A person with a positive COVID-19 test but who does not have symptoms is considered to be infectious from 2 days before their test was taken until 10 days after their test.
How long to I have to quarantine?
If you have been in contact with someone with COVID-19, you must quarantine for 10 full days from the last contact with the infected person*. You can end your quarantine after Day 10 if you never had any symptoms and you take the following precautions from Day 11 through Day 14:

- **Be extra careful.** Wear a mask when around other people (including those in your household), stay at least 6 feet away from others, wash your hands often, and take other steps to protect others (and yourself).
- **Keep checking for COVID-19 symptoms every day.** If you do get symptoms, isolate at home and follow the “If you develop symptoms” instructions below.

It is best to keep away from people at high risk for getting very sick from COVID-19 for the full 14 days.

* If you don’t know when you were exposed to the infected person and you received a Public Health Emergency Quarantine Order, you can end your quarantine 10 days after the date the order was issued (as long as you don’t have symptoms).

If you have a test for COVID-19, and it is negative, you must still quarantine for at least 10 days.

How to calculate when your quarantine period ends

- **If you have no more contact with the infectious person**
  Your last day of quarantine is 10 days from the date after you last had close contact. **For example:**
  o If you continue to have contact with the infected person **and** you live with and/or care for the person with COVID-19:  
    - If you can avoid close contact, your last day of quarantine is 10 days from when the person with COVID-19 started to follow the **Home Isolation Instructions**.
    - **But,** if you have close contact with them again while they are still in isolation, your 10-day quarantine period will have to restart from the last day that you had close contact.
    - If you cannot avoid close contact, your last day of quarantine is 10 days from the date that the person with COVID-19 was told their isolation ends.

Restrictions during quarantine
To prevent you from spreading COVID-19, you must restrict activities and limit actions that may put you in contact with others.

- Stay home. Do not go to work, school, or public areas. You may only leave quarantine to get needed medical care.
- Do not allow visitors.
- Separate yourself from others in your home (unless they are also in quarantine). If you need to be in the same room as other household members:
  - Wear a mask. If possible, choose a mask that has multiple layers and a snug fit and consider double masking. Note: Children under the age of 2 should not wear masks. Children between the ages of 2 and 8 should use them but must be supervised by an adult to make sure they can breathe safely and avoid choking or suffocation. A mask should not be placed on anyone who has trouble breathing or would need help to remove it. See Masks for more information including who should not wear a mask.
  - Keep 6 feet away. If you have to share a room, try setting up the room so that you can stay 6 feet apart, if possible. It is important to stay away from unvaccinated people who are at higher risk of serious illness.
  - Open windows or use a fan or an air conditioner in shared spaces in the home.
  - Use a separate bathroom. If this is not possible, disinfect the bathroom after use.
- Do not make or serve food to others, if possible. If there is no one else to prepare and serve food, then be sure to wear a mask and wash your hands frequently.
Getting help with food and other necessities

- If you do not have someone to help you, you can arrange for food and other supplies to be left at your door. If you need help finding food or other supplies, call 2-1-1, or visit 211la.org, or the Public Health resource webpage.

Work and School

- Disability Insurance, Unemployment & Paid Family Leave may be available for people who cannot work because they, or a family member, need to isolate or quarantine. Visit the California Employment Development Department for more information.
- When your quarantine period is over, you may return to work or school. You do not need a letter from Public Health and should not need a negative test.

Steps to take when getting medical care or COVID-19 testing

- Wear a mask to protect others (see information on masks above).
- Use a private car if possible. If you cannot drive yourself, be sure to keep as much distance as possible between you and the driver and leave the windows down. You should not use public transportation.

TESTING FOR COVID-19

As a close contact to someone with COVID-19, it is recommended that you get tested.* This is to check if you are already infected. If you test negative, you still need to quarantine for 10 days.

* Testing is not recommended for people who had a positive viral COVID-19 test in the last 90 days and do not currently have symptoms of COVID-19.

- To get a test, call your doctor, visit covid19.lacounty.gov/testing, or call 2-1-1.
  - Follow testing center instructions. See Steps to take when getting medical care/testing above.
- If your test result is positive:
  - You have COVID-19
  - You need to isolate. See the Home Isolation Instructions for People with COVID-19 at ph.lacounty.gov/covidisolation.
  - You need to tell all of your close contacts to quarantine and give them these quarantine instructions at ph.lacounty.gov/covidquarantine.
- If your test result is negative:
  - You may still be infected, but it is too early to show on the test.
  - You need to quarantine for 10 days after your last close contact with the person with COVID-19.
  - Monitor your symptoms and follow the instructions below.

MONITOR YOUR HEALTH

- It is important to monitor your health for symptoms of COVID-19 for 14 days from your last contact with the infected person. Symptoms of COVID-19 may include any of the following: fever or chills, cough, shortness of breath, feeling tired, muscle or body aches, headache, sore throat, nausea or vomiting, diarrhea, congestion or runny nose, or new loss of taste or smell.
- Call 911 or go to an emergency room if you are having serious symptoms. Serious symptoms include difficulty breathing, pain or pressure in your chest, have bluish lips or face or being confused or having difficulty waking up.
If you develop symptoms

- Isolate yourself at home (this means if you left quarantine and it is Day 11-14 you need to return home immediately and strictly stay away from others except to get medical care).
- Contact your healthcare provider, clinician advice line, or telemedicine provider for a medical assessment and arrange a test for COVID-19. Tell them that you have been in contact with someone who has COVID-19. Call the Los Angeles County Information line at 2-1-1 if you do not have a doctor. This number is available 24/7.
  - If you test positive for COVID-19 or your provider thinks you have COVID-19, you must follow the Los Angeles County “Public Health Emergency Isolation Order” for COVID-19 and the “Home Isolation Instructions for People with COVID-19 Infection,” which are available in English, Spanish, and other languages.
  - If you test negative for COVID-19 and/or our provider thinks that you do not have COVID-19, you must complete your quarantine period and stay home until at least 24 hours have passed since you have been fever-free without using fever reducing medications.
  - If you don’t get tested, you should isolate for at least 10 days from when your symptoms first started and at least 24 hours have passed since you have been fever-free without using fever reducing medications.

Dealing with Stress

COVID-19 and quarantine may be stressful for people. Visit the Los Angeles County Department of Mental Health’s COVID-19 webpage and the 211LA webpage 211la.org/resources/subcategory/mental-health for local resources to help with mental health & wellbeing concerns. Guidance and resources, including information on crisis hotlines, are also available on the CDC webpage Coping with stress.

If you need to speak with someone about your mental health, contact your doctor or the Los Angeles County Department of Mental Health Access Center 24/7 Helpline at (800) 854-7771. This number is available 24/7.

You can also text “LA” to 74174.

TALK TO PUBLIC HEALTH - Contact Tracing

Contact tracing is a simple, confidential process that is being used to help slow the spread of COVID-19.
- You may receive a call from a public health specialist if you have been in contact with someone with COVID-19. If you get a call or message from "LA PublicHealth" or 1-833-641-0305, please do your part by taking the call. You will be asked about your health and the places you have been.
- The specialist can answer your questions and provide information like how to get a COVID-19 test or how to find a doctor or get help while you are in quarantine.
- Click here for more information about contact tracing.

PEOPLE WHO HAVE BEEN FULLY VACCINATED

If you are a close contact to someone with COVID-19, you are not required to quarantine if:
1) you are fully vaccinated (this means it’s been 2 weeks or more since getting the second dose of the Pfizer or Moderna COVID-19 vaccines and 2 weeks or more since getting the Johnson and Johnson/Janssen vaccine) and
2) you have had no symptoms of COVID-19 since your close contact.

Even if you do not need to quarantine, it is important that you:
• **Monitor your health** for symptoms of COVID-19 for 14 days from your last contact with the infected person.
• **Talk to public health** if you get a call or message from "LA PublicHealth" or 1-833-641-0305.
• Continue to **protect yourself and others**. See [After you are fully vaccinated](#).

---

**FURTHER INFORMATION**

• For more information, visit the Public Health website [ph.lacounty.gov/Coronavirus](http://ph.lacounty.gov/Coronavirus) or call 2-1-1 (which is available 24/7).
• Please call your doctor for any questions about your health. If you need help finding a doctor, call 2-1-1.
