

# Invasive Meningococcal Disease: 2018

## Los Angeles County Epidemiology Report

### January 12, 2018

No new cases of invasive meningococcal disease (IMD) have been reported in LAC in 2018. The total number of IMD cases in LAC for 2017 is 10, including two fatalities (Table 1). The regional outbreak due to serogroup C, occurring primarily among MSM\*, has been ongoing since March 2016, and includes 33 cases from jurisdictions throughout southern California. All 3 serogroup C cases in LAC are outbreak-associated, though do not have direct social links to each other or other outbreak cases. No common social linkages among outbreak-associated cases in the region have been identified. The past year's increases in IMD in LAC highlight the importance of observing meningococcal vaccination recommendations for certain high risk groups (see box). Providers should implement evidence-based practices to ensure completion of the 2-dose vaccination schedule for all HIV-infected persons.

\*Men who have had intimate or sexual contact with another male.

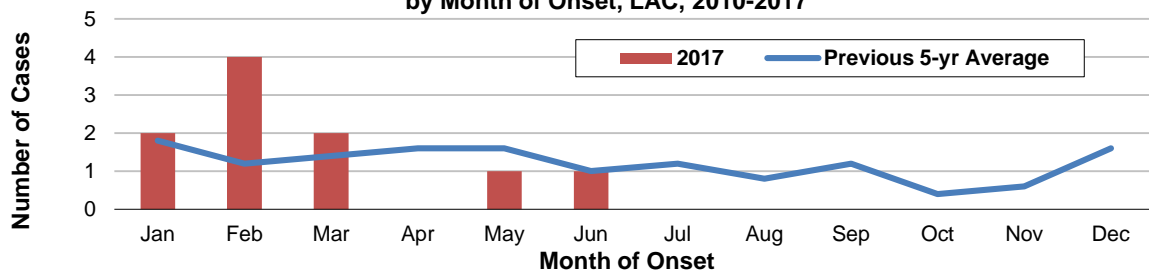

**Table 1. Characteristics of IMD Cases: Los Angeles County, 2016-2017**

|                | Number of Cases <sup>1</sup> | Demographics |                    | MSM | Serogroups |    |   |   |               |                | Deaths |
|----------------|------------------------------|--------------|--------------------|-----|------------|----|---|---|---------------|----------------|--------|
|                |                              | Gender M/F   | Median Age (Range) |     | B          | C  | Y | W | Non-Groupable | Not Typed      |        |
| 2017 (to date) | 10                           | 5/5          | 25.5 (12-72)       | 2   | 7          | 3  | 0 | 0 | 0             | 0              | 2      |
| 2016           | 20                           | 15/5         | 30.5 (13-76)       | 9   | 5          | 10 | 1 | 2 | 1             | 1 <sup>2</sup> | 0      |

<sup>1</sup> Count as of Friday 1/12/2018. Excludes reports from Long Beach and Pasadena. Totals are provisional and subject to change.

<sup>2</sup>Not available for typing.

**Invasive Meningococcal Disease Cases by Month of Onset, LAC, 2010-2017**

**Table 2 . IMD Cases by Service Planning Area (SPA) Los Angeles County, 2017**

| LOCATION               | Year Total <sup>1</sup> | 2016 Total     |
|------------------------|-------------------------|----------------|
| SPA 1: Antelope Valley | 0                       | 0              |
| SPA 2: San Fernando    | 2                       | 3 <sup>2</sup> |
| SPA 3: San Gabriel     | 0                       | 3              |
| SPA 4: Metro           | 1 <sup>3</sup>          | 5              |
| SPA 5: West            | 2                       | 4 <sup>3</sup> |
| SPA 6: South           | 2                       | 0              |
| SPA 7: East            | 2                       | 3              |
| SPA 8: South Bay       | 1                       | 2              |
| <b>TOTAL</b>           | <b>10</b>               | <b>20</b>      |

<sup>1</sup> Count as of Friday, 1/12/2018. Excludes Long Beach and Pasadena. Totals are provisional and subject to change.

<sup>2</sup> Includes a homeless resident.

<sup>3</sup> Includes a case who traveled out of county during incubation period.

### Recommendations and Resources

LACDPH recommends meningococcal conjugate vaccine be offered to:

- All MSM, regardless of HIV status;
- All HIV-infected persons.

Routine vaccination is recommended for all persons 11-12 years of age, with a booster dose at 16 years.

For IMD epidemiology reports and more information:
