

ECE ACTIONS FOR ISOLATION FLOW CHART

Have you tested positive
for COVID-19?

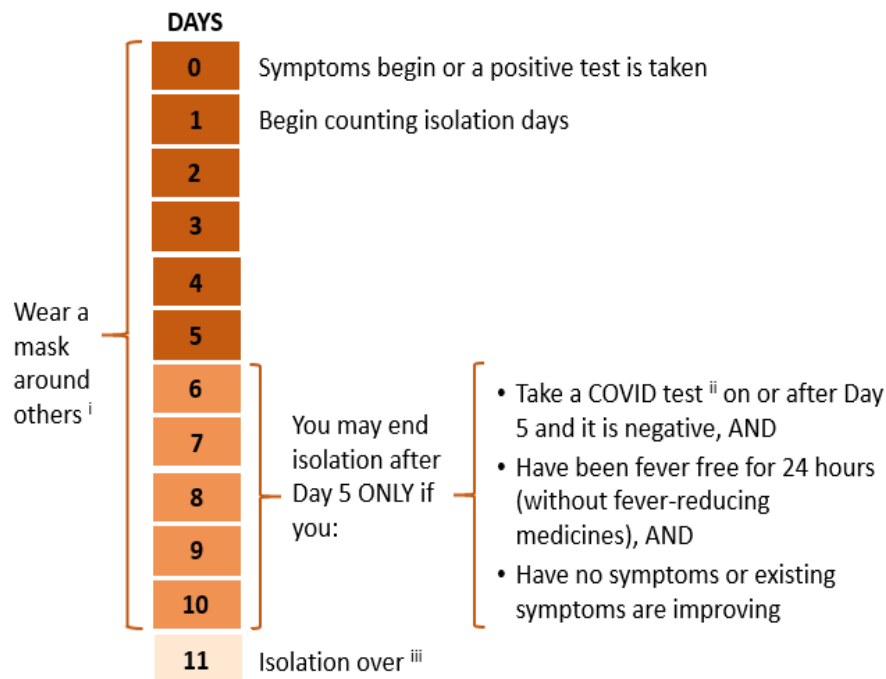

no

You do not
need to isolate

yes

Stay home for at least 5 days, regardless of vaccination status,
previous infection, or symptoms.

ISOLATION

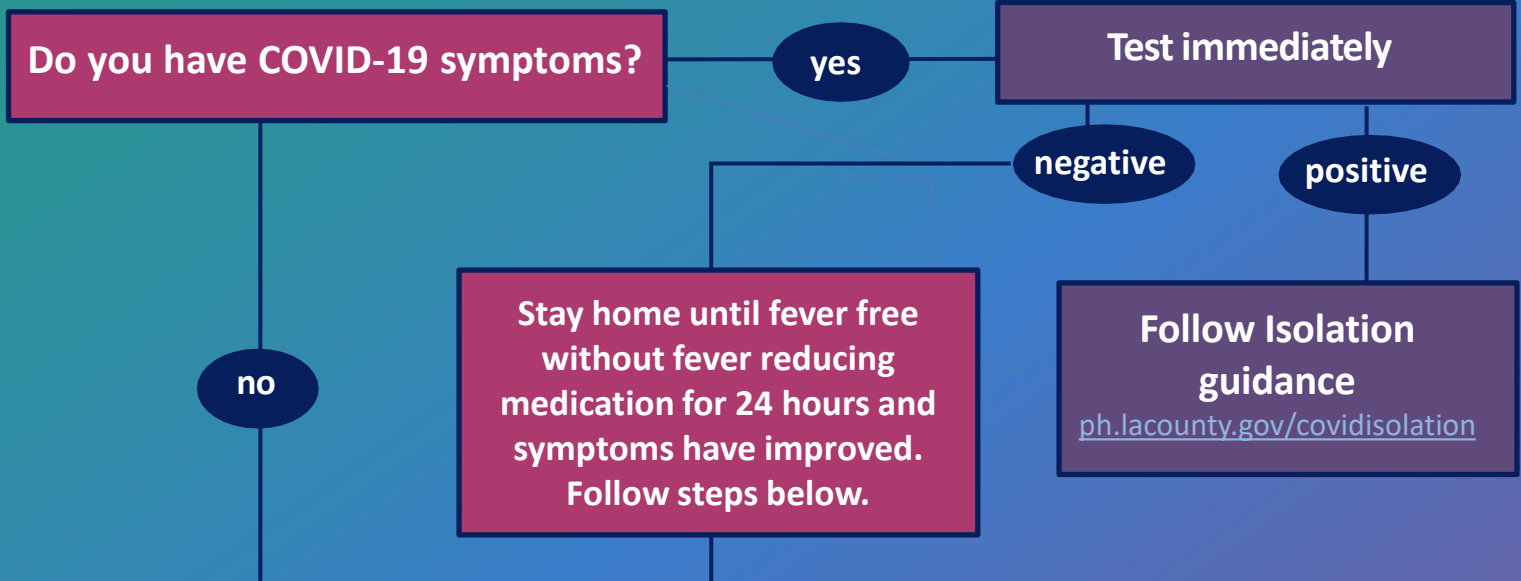

- i. When in isolation, those aged 2 and older must wear a highly protective mask around others even in your own home. If you end isolation after Day 5, children aged 2 years and older are *strongly recommended* to wear a mask through Day 10. Staff are required to mask through day 10.
- ii. FDA authorized viral test (e.g., PCR or Antigen test, including at-home tests). Antigen test preferred.
- iii. If you still have a fever, stay in isolation until 24 hours after your fever resolves. If you are immunocompromised or had severe COVID-19, you may need to isolate for longer. Talk with doctor about when you can be around others.

For more information, visit ph.lacounty.gov/covidisolation.

- Tell your close contacts that they have been exposed and need to follow instructions at ph.lacounty.gov/covidcontacts
- See full isolation instructions for people with COVID-19 at ph.lacounty.gov/covidisolation

ECE ACTIONS FOR CLOSE CONTACTS FLOW CHART

In ECE settings, there are two methods for identifying close contacts. You are a "close contact" if you shared the same indoor airspace OR were within 6 feet of someone with COVID-19 for a total of 15 minutes or more over a 24-hour period while they were infectious.

If you are a close contact and do not have symptoms, you DO NOT need to quarantine but are required to take the following steps to reduce the risk of spreading COVID-19 to others.*

1. **Monitor symptoms** for 10 days. If you develop symptoms, you need to test immediately. If positive, follow isolation guidance at ph.lacounty.gov/covidisolation.
2. **Wear a highly protective mask** around others indoors for those aged 2 years and older, except when eating or drinking, for 10 days after the last date of exposure.
3. **Test** with an FDA-authorized viral COVID-19 test (e.g., PCR or Antigen test, including at home tests) within 3-5 days since the last date of exposure.**

**If you had COVID-19 in the past 90 days, you do not need to test unless you develop symptoms.

Children less than 24 months, who should not wear a mask, that are close contacts and asymptomatic may remain at the facility if they are monitored for symptoms and test with an FDA-authorized viral COVID-19 test within 3-5 days since the last date of exposure.

*If applying the within 6 ft of an infected person for 15 minutes or more over a 24-hour period definition for close contacts in classrooms or similar-sized settings, all other individuals who shared the same indoor airspace with the infected person for 15 minutes or more over a 24-hour period are strongly recommended to follow the above guidance for symptom monitoring, masking (if aged 2 years and older), and testing.
