## Notes on Listed Agenda Items

### Item 1: Welcome & Greeting

Members joined the Microsoft Teams Meeting call at 4:00 PM. The meeting was opened by facilitator Susan Harden. Ms. Harden went over the meeting agenda items that were discussed in collaboration with the CAG members. Ms. Harden recognized the five-year commemoration of the Aliso Canyon Blowout.

### Item 2: Community Engagement & Communication

Prior to the CAG meeting, in collaboration with Ms. Harden, the Community Engagement Specialist (CES) Cristina Vega, and the CAG member representatives developed a poll question as requested by the CAG. Ms. Harden walked the CAG members through steps on how to answer a poll question.

### Item 3: Scientific Oversight Committee

Ms. Vaculik provided a recap of the October SOC meeting and noted that the SOC will begin drafting a document to outline the Health Study goals and priorities. CAG members requested the summary of existing environmental data that was provided to the SOC for review and expressed concern that the SOC may not have all the information needed to begin the development of the goals and priorities for the Health Study. SOC members Drs. Simon and Nordella offered differing perspectives on the matter. With regard to the vacant position on the SOC, Ms. Vaculik explained that the SOC has been asked to identify areas of expertise that they feel are needed on the SOC.

### Item 4: Other/Requested Updates

Dr. Muntu Davis, the Health Officer for Los Angeles County, and Executive Lead of the Aliso Canyon Disaster Health Research Study (ACDHRS), announced that Supervisor Katherine Barger's office and the Los Angeles County Counsel are pursuing requests for any outstanding environmental data. CAG members announced the CAG has a meeting pending with Supervisor Barger in the upcoming week and agreed to provide an update during the next scheduled CAG meeting.

Katie Butler, Senior Staff Analyst of the ACDHRS, provided an update that Public Health has been coordinating with the Los Angeles County Fire Department (LADPH) Health and Hazardous Materials Division (HHMD) to ensure that 150 waste bins containing soils from the Aliso Canyon

blowout and well-control attempts remain on site at the Aliso Canyon gas storage facility for the second round of sample collection. The SOC recommended that additional samples be taken from the waste bins (specifically those with drilling muds, fluids and crude oil products) and put on hold at a laboratory for potential future use by the third-party Health Study researchers if needed. Public Health shared that the summary report will be posted on the [Aliso Canyon Health Research Study ACDHRS\) Website](#).

Ms. Butler mentioned that the additional sampling is planned for Thursday, October 29th and that Public Health will inquire with the Southern California Gas Company (SoCalGas) whether CAG and SOC members can visit the Aliso Canyon gas storage facility during the sampling event. CAG members asked Public Health to identify current SOC members that are oil and gas experts. In addition to listing the experts, the Research Development Manager (RDM) Kristina Vaculik shared the link to [SOC member bios](#) with attendees via the meeting chat. CAG members expressed concern about potential spills when the waste materials are transported off the facility. Ms. Butler reassured the CAG that there are regulatory procedures and policies in place that SoCalGas company must follow to ensure safe transport and disposal. Finally, Ms. Butler added that in addition to the current sampling, the soil surrounding Well SS-25 was sampled in 2016, which was a good time to sample because of the higher concentration of Volatile Organic Chemicals (VOC's) in the soil at that time.

CAG members requested an update on the 31 bins of VOC-contaminated soils that were removed from the Aliso Canyon gas storage facility in 2016 in accordance with South Coast Air Quality Management District (SCAQMD) Rule 1166. Public Health inquired with SCAQMD to learn more about the regulatory nature of the removal of the bins from the Aliso Canyon gas storage facility and learned that Rule 1166 requires any organization or contractor to apply for, and implement, a mitigation plan if they are going to excavate or grade soils that have been contaminated with VOCs. SCAQMD oversees the implementation of the mitigation plan. Ms. Vaculik will email the CAG members more information about Rule 1166 which is also available on the SCAQMD website.

### Item 5: Public Comment

A community member provided a comment regarding the preliminary summary of the Community Opinion Survey that was presented during CAG meeting 12, expressing concern that the Porter Ranch Community was underrepresented. A CAG member that was a part of the survey planning subcommittee announced that in conjunction with the Porter Ranch Neighborhood Council, the online survey would be made available for all interested residents. A community member was happy to announce they took the online Community Opinion Survey and would be encouraging other residents to take the online survey as well. Ms. Harden

announced that Public Health will hold a community outreach and engagement subcommittee meeting to begin planning the community outreach that will take place once the draft Health Study Goals and Priorities are available for the community to weigh in on. Ms. Harden apologized for not getting through all items on the agenda, made some closing comments, and thanked attendees for their participation.
