

## **CDPH Vaccine Update: Providers that Paused Use of Moderna Lot 041L20A COVID-19 Vaccine Can Immediately Resume Administering Doses**

**January 21, 2021**

---

The California State Epidemiologist has advised providers that they can immediately resume the administration of lot 41L20A of the Moderna COVID-19 vaccine that was temporarily paused on Sunday due to possible allergic reactions.

CDPH convened the Western States Scientific Safety Review Workgroup and additional allergy and immunology specialists to examine the evidence collected. CDPH had further discussions with the County of San Diego Department of Public Health, the FDA, CDC and manufacturer, and found no scientific basis to continue the pause. Providers that paused vaccine administration from Moderna Lot 41L20A can immediately resume. See [full CDPH statement](#).
