

CDPH Health Alert:

CDPH Recommends Immunizing Infants with RSV Monoclonal Antibodies through April 2026, Given Ongoing RSV Disease Activity

March 12, 2026

Due to ongoing Respiratory Syncytial Virus (RSV) transmission in California, the California Department of Public Health (CDPH) recommends continuing RSV immunization of eligible infants and young children with RSV monoclonal antibody products through April 30, 2026.

The 2025-2026 RSV season started later than prior years and activity remains elevated statewide and in LA County. As of the week ending 2/28/26, 7.2% of respiratory specimens tested at LA County sentinel labs were positive for RSV. This is elevated but decreasing.

RSV monoclonal antibody ordering remains available through the Vaccines for Children's Program through the end of April.

LA County Department of Public Health RSV resources:
