1. The percentages and numbers reported reflect the best estimates in each area. These estimates should not be considered exact population numbers but, should be used as trend data for planning purposes.
2. The actual percentages and numbers may be lower or higher based on the confidence interval reported for each area. We are $95 \%$ confident that the actual percentage
in each area is within the range of the confidence interval presented for that area.
3. Parents' poverty status. For a family of four, the 1997 federal poverty level (FPL) was $\$ 16,050$ a year and $200 \%$ of poverty was $\$ 32,100$

1. The percentages and numbers reported reflect the best estimates of the respondents in the Los Angeles County. These estimates should not be considered exact population
numbers but should be used as trend data for planning purposes.
2. Adults between the age 18 to 64 years.
3. The actual percentages and numbers may be lower or higher based on the confidence interval reported. We are $95 \%$ confident that the actual percentage in each area
is within the range of the confidence interval presented for that area.
4. Somewhat difficult or very difficult getting care.
5. Poverty status is determined based on federal poverty level (FPL). In 1997, FPL for a family of four was $\$ 16,050$ a year and $200 \%$ of poverty was $\$ 32,100$.

1. The percentages and numbers reported reflect the best estimates in each area. These estimates should not be considered exact population numbers but,
.The actual percentages and numbers may be lower
2. The actual percentages and numbers may be lower or higher based on the confidence interval reported for each area. We are $95 \%$ confident that the actual percentage in each area is within the range of the confidence interval presented for that area.
3. Alcohol users were classified into four groups based on the number of the number of drinks consumed. A "drink" is defined as a can or bottle of beer, one glass of wine or cocktail or shot of liquor. Each drink is assumed to contain 0.5 oz of ethyl alcohol. Accordingly, a non-drinker is one who consumes 0.0 oz of ethyl alcohol daily, light drinker ( 0.001 to 0.210 oz ), moderate drinker ( 0.211 to 0.990 oz ), and heavy drinker ( 1.0 oz or more).
4. Adults aged 18 years and older.
5. Children aged 0 to 17 years.
6. Weight status is determined based on the body mass index (BMI). BMI is calculated by taking into account weight and height of the respondent.
Accordingly, when was $B M I<25$ then the person is classified as not overweight, $25=<B M I<30$ as mild
or moderately overweight or moderately overweight, and $B M I>=30$ as severely
overweight persons. overweight persons.
7. Men aged 40 years and older.
8. Women aged 18 years and older.
9. Men aged 18 years and older.
10. Women aged 50 years and older.

1. The percentages and numbers reported reflect the best estimates in each area. These estimates sould not be considered exact population numbers but, should be used as trend data for planning purposes.
2. The actual percentages and numbers may be lower or higher based on the confidence interval reported for each area. We are $95 \%$ confident he range of the confidence interval presented for he range of the confidence interval presented for
3. Alcohol users were classified into four groups based on the number of the number of drinks consumed. A "drink" is defined as a can or bottle of beer, one glass of wine or cocktail or shot of liquor. Each drink is assumed to contain 0.5 oz of ethyl alcohol. Accordingly, a non-drinker is one who consumes 0.0 oz of ethyl alcohol daily, light drinker ( 0.001 to 0.210 oz ), moderate drinker ( 0.211 to 0.990 oz ), and heavy drinker (1.0 oz or more).
4. Adults aged 18 years and older.
5. Children aged 0 to 17 years.
6. Weight status is determined based on the body mass index (BMI). BMI is calculated by taking Accordingly when was BMI<25 then the person is classified as not overweight $25=\angle B M I<30$ a mild or moderately overweight and $B M I>=30$ as severely overweight persons.
. Men aged 40 years and older
. Women aged 18 years and older
. Men aged 18 years and older.
7. Women aged 50 years and older.

1. The percentages and numbers reported reflect the best estimates in each area. These estimates should not be considered exact population numbers but, should be used as trend data for planning purposes.
2. The actual percentages and numbers may be lower or higher based on the confidence interval eported for each area. We are $95 \%$ confident hat the actual percentage in each area is with the range of
3. Alcohol users were classified into four groups based on the number of the number of drinks consumed. A "drink" is defined as a can or bottle of beer, one glass of wine or cocktail or shot of iquor. Each drink is assumed to contain 0.5 oz of ethyl alcohol. Accordingly, a non-drinker is ne who consumes 0.0 oz of ethyl alcohol dail, light drinker ( 0.001 to 0.210 oz ), moderate drinker ( 0.211 to 0.990 oz ), and heavy drinker ( 1.0 oz or more).
4. Adults aged 18 years and olden
5. Cbildren aged 0 to 17 years.
6. Weight status is determined based on the body mass index (BMI). BMI is calculated by taking into account weight and height of the respondent is classified as not overweight, $25=<B M I<30$ as mild or moderately overweight, and $B M I>=30$
as severely overweight persons.
7. Men aged 40 years and older:
8. Women aged 18 years and olden
9. Men aged 18 years and older.
10. Women aged 50 years and older.

1. The percentages and numbers reported reflect the best estimates in each area. These estimates should not be considered exact population numbers but, should be used as trend data for planning purposes.
2. The actual percentages and numbers may be lower or higher based on the confidence interval reported for each area. We are $95 \%$ confident that the actual percentage in each area is within the range of the confidence interval presented for that area.
3. Alcohol users were classified into four groups based on the number of the number of drinks consumed. A "drink" is defined as a can or bottle f beer, one glass of wine or cocktail or shot of liquor. Each drink is assumed to contain 0.5 oz of ethyl alcohol. Accordingly, a non-drinker is one who consumes 0.0 oz of ethyl alcohol daily, light drinker ( 0.001 to 0.210 oz ), moderate drinker ( 0.211 to 0.990 oz), and heavy drinker (1.0 oz or more).
4. Adults aged 18 years and older
5. Children aged 0 to 17 years.
6. Weight status is determined based on the body mass index (BMI). BMI is calculated by taking into account weight and height of the respondent. Accordingly, when was BMI<25 then the person is classified as not overweight, $25=<B M I<30$ as mild or moderately overweight, and $B M I>=30$
as severely overweight persons.
7. Men aged 40 years and older.
8. Women aged 18 years and older:
9. Men aged 18 years and older.
10. Women aged 50 years and older.

1. The percentages and numbers reported reflect the best estimates in each area. These estimates should not be considered exact population numbers but, should be used as trend data for planning purposes.
2. The actual percentages and numbers may be lower or higher based on the confidence interval reported for each area. We are $95 \%$ confident that the actual percentage in each area is within the range of the confidence interval presented for that area.
3. Alcohol users were classified into four groups based on the number of the number of drinks consumed. A "drink" is defined as a can or bottle of beer, one glass of wine or cocktail or shot of liquor. Each drink is assumed to contain 0.5 oz of ethyl alcohol. Accordingly, a non-drinker is one who consumes 0.0 oz of ethyl alcohol daily, light drinker ( 0.001 to 0.210 oz ), moderate drinker ( 0.211 to 0.990 oz ), and heavy drinker (1.0 oz or more).
4. Adults aged 18 years and older.
5. Children aged 0 to 17 years.
6. Weight status is determined based on the body mass index (BMI). BMI is calculated by taking into account weight and height of the respondent. Accordingly, when was BMI<25 then the person is classified as not overweight, $25=\angle B M I<30$ as mild or moderately overweight, and BMI> $=30$ as severely overweight persons.
7. Men aged 40 years and older.
8. Women aged 18 years and olden
. Men aged 18 years and older.
9. Women aged 50 years and older.

1. The percentages and numbers reported reflect the best estimates in each area. These estimates best estimates in each area. These estimates numbers but, should be used as trend data for planning purposes.
2. The actual percentages and numbers may be lower or higher based on the confidence interval reported for each area. We are $95 \%$ confident that the actual percentage in each area is within he range of the confidence interval presented for that area.
3. Alcohol users were classified into four groups based on the number of the number of drinks consumed. A "drink" is defined as a can or bottle of beer, one glass of wine or cocktail or shot of liquor. Each drink is assumed to contain 0.5 oz of ethyl alcohol. Accordingly, a non-drinker is ne who consumes 0.0 oz of ethyl alcohol daily, light drinker ( 0.001 to 0.210 oz ), moderate drinker ( 0.211 to 0.990 oz ), and heavy drinker
(1.0 oz or more) (1.0 oz or more).
4. Adults aged 18 years and older.
5. Children aged 0 to 17 years.
6. Weight status is determined based on the body mass index (BMI). BMI is calculated by taking Accordingly, when was $B M I<25$ then the person is classified as not overweight $25=<B M I<30$ as mild or moderately overweight and $B M L>=30$ as severely overweight persons. $\quad$ BMI> $=30$
Men aged 40 Ja
7. Women aged 18 years and olde
8. Men aged 18 years and older
9. Women aged 50 years and older.

1. The percentages and numbers reported reflect the best estimates in each area. These estimates hould not be considered exact population numbers but, should be used as trend data for planning purposes.
2. The actual percentages and numbers may be lower or higher based on the confidence interval reported for each area. We are 95\% confident that the actual percentage in each area is within the range of the confidence interval presented for
. Alcohol users were classified into four groups based on the number of the number of drinks consumed. A "drink" is defined as a can or bottle of beer, one glass of wine or cocktail or shot of liquor. Each drink is assumed to contain 0.5 oz of ethyl alcohol. Accordingly, a non-drinker is one who consumes 0.0 oz of ethyl alcohol daily, light drinker ( 0.001 to 0.210 oz ), moderate drinker ( 0.211 to 0.990 oz ), and heavy drinker (1.0 oz or more).
3. Adults aged 18 years and older.
4. Children aged 0 to 17 years.
5. Weight status is determined based on the body mass index (BMI). BMI is calculated by taking Accordingly, when was BMI<25 then the person is classified as not overweight $25=\angle B M I<30$ as mild or moderately overweight and $B M I>=30$ as severely overweight persons.
. Men aged 40 years and older
. Women aged 18 years and older
. Men aged 18 years and older.
6. Women aged 50 years and older.

[^5]
[^0]:    1. The percentages and numbers reported reflect the best estimates in each area. These estimates should not be considered exact population numbers but, should be used as
    trend data for planning purposes.
    2. The actual percentages and numbers may be lower or higher based on the confidence interval reported for each area. We are $95 \%$ confident that the actual percentage in each area is within the range of the confidence interval presented for that area.
    3. For a family of four, the 1997 federal poverty level (FPL) was $\$ 16,050$ a year and $200 \%$ of poverty was $\$ 32,100$.
    4. Homelessness in the past 5 years.
[^1]:    1. The percentages and numbers reported reflect the best estimates of the respondents in the Los Angeles County. These estimates should not be considered exact population . The percentages and numbers reported reflect the best estimates of
    2. The actual percentages and numbers may be lower or higher based on the confidence interval reported. We are $95 \%$ confident that the actual percentage in each area is within the range of the confidence interval presented for that area.
    3. Alcohol users were classified based on the number of drinks consumed. A drink is defined as a can or bottle of beer, one glass of wine or cocktail or shot of liquor. Each
    drink is assumed to contain 0.5 oz of ethyl alcohol. Heavy alcohol users are those who consume 1.0 or more ounces of ethyl alcohol daily.
    4. Poverty status is determined based on federal poverty level (FPL). In 1997, FPL for a family of four was $\$ 16,050$ a year and $200 \%$ of poverty was $\$ 32,100$.
    5. Adults (18 and older) who currently smoke cigarettes.
    6. Adults who own a rifle, shotgun, pistol or revolver.
[^2]:    1. The percentages and numbers reported reflect the best estimates in each area. These estimate hould not be considered exact population planning purposes.
    2. The actual percentages and numbers may be lower or higher based on the confidence interval reported for each area. We are 95\% confident that the actual percentage in each area is within
    the range of the confidence interval presented for the range of the confidence interval presented for
    3. Alcohol users were classified into four groups based on the number of the number of drinks consumed. A "drink" is defined as a can or bottle of beer, one glass of wine or cocktail or shot of liquor. Each drink is assumed to contain 0.5 oz of ethyl alcohol. Accordingly, a non-drinker is ne who consumes 0.0 oz of ethyl alcohol daily, light drinker ( 0.001 to 0.210 oz ), moderate drinker ( 0.211 to 0.990 oz ), and heavy drinker (1.0 oz or more).
    4. Adults aged 18 years and older.
    5. Children aged 0 to 17 years.
    6. Weight status is determined based on the body mass index (BMI). BMI is calculated by taking into account weight and height of the respondent. is classified as not overweight, $25=<B M I<30$ as mild or moderately overweight and $B M I>=30$ mild or moderately overweight, and BMI>=30 overweight persons.
    7. Men aged 40 years and older.
    8. Women aged 18 years and olden
    . Men aged 18 years and older
