

# A Promising Surveillance System to Monitor Perinatal/Infant Health: Los Angeles Mommy and Baby (LAMB) Project

Maternal, Child & Adolescent Health Programs, Los Angeles County Department of Public Health  
Shin Margaret Chao, PhD, Chandra Higgins, MPH, Giannina Donatoni, PhD, Yvonne Lau, MPH, Cathleen Bemis, MS, Cynthia Harding, MPH

## Background

- ❖ Poor birth outcomes are a continuing public health challenge in LAC.
- ❖ The distributions of poor birth outcomes show significant racial/ethnic and geographic disparities.
- ❖ The precise reasons for these persistent disparities are mostly unknown.
- ❖ In 2005, MCAH Programs established the Los Angeles Mommy and Baby (LAMB) Project to provide timely data on factors associated with adverse birth outcomes in LAC.
- ❖ This bi-annual countywide survey provides comprehensive and groundbreaking perinatal data for public health professionals and community stakeholders in addressing disparities in poor birth outcomes in LAC

## Objectives

- ❖ To identify factors that may relate to poor birth outcomes (low birth weight, preterm births), especially focuses on those factors that may be preventable and can be addressed through public health and system changes
- ❖ To establish a surveillance system in Los Angeles County to monitor maternal/infant health indicators related to poor birth outcomes
- ❖ To assist local health department, community-based organizations in designing evidence-based program and policy/planning process

## Methods

**Participants:** Women who recently gave birth in Los Angeles County in 2005

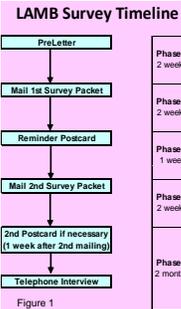

**Design:** Population-based stratified sampling; over sampling on low birth weight and pre-term births (LBW/PT) as well as African American, Asian/Pacific Islander, and Native American births

**Procedure:** LAMB Project followed CDC PRAMS procedures as described in figure 1. Surveys were mailed to participants with telephone follow-up. The survey was administered in English, Spanish, and Chinese with translators available for other languages. To enhance the response rate, all respondents were given a \$20 gift certificate.

**Instrument:** The survey examined areas that are known to have an impact on birth outcomes, including

- Preconception health
- Prenatal care
- Maternal medical conditions
- Psychosocial risk factors
- Behavioral risk factors

**Analysis:** Data were linked with information from birth and death certificates

## Selected 2005 LAMB Results and Participant Feedback

Close to 5,500 women responded to the survey. The adjusted response rate was close to 50%. Summary of selected indicators is included in the tables below.

Table 1. Preconception Health Indicators

	Percent	95 % CI	Estimated # pregnant women
Preconception Health			
Uninsured	35.6%	33.4 – 38.0	53,208
Unintended pregnancy	40.0%	37.7 – 42.2	59,784
Did not take multi-vitamin	57.0%	54.9 – 59.3	85,193
Smoking six months prior to becoming pregnant	9.2%	8.0 – 10.4	13,750
Obstetrical history			
Prior miscarriage	16.6%	14.9 – 18.1	24,810
Prior preterm or low birth weight birth	9.4%	8.1 – 10.9	14,049
Maternal medical condition prior to pregnancy			
Overweight	38.1%	35.8 – 40.3	58,238
Anemia	9.8%	8.5 – 11.2	14,647
Periodontal disease	5.4%	4.3 – 6.4	8,070
High blood pressure	2.6%	1.9 – 3.4	3,886
Diabetes	3.0%	2.2 – 3.9	4,483

Table 2. Prenatal Care

	Percent	95 % CI	Estimated # pregnant women
Inadequate prenatal care	11.6%	9.9 – 13.4	17,337
Late entry into prenatal care	7.2%	6.0 – 8.4	10,761

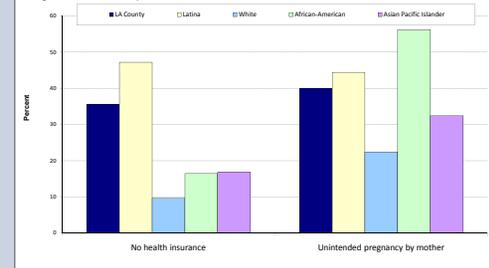

Table 3. Psychosocial and Behavior Risk Factors

	Percent	95 % CI	Estimated # pregnant women
Depressed during pregnancy	34.0%	31.7 – 36.2	50,817
Reported pregnancy as a hard time of their life	17.2%	15.5 – 18.8	25,707
Abused by partner during pregnancy	2.4%	1.7 – 3.1	3,587
Smoked during pregnancy	2.8%	2.2 – 3.5	4,184
Exposed to second hand smoke	10.8%	9.4 – 12.3	16,141

Table 4. Infant Health and Postpartum Indicators

	Percent	95 % CI	Estimated # pregnant women
Ever breastfed	77.6%	75.6 – 79.6	115,982
Baby slept on his/her back	62.8%	60.5 – 65.0	93,862
Baby slept in bed with mother/other person	76.4%	74.5 – 78.3	114,188
Depressed after baby was born	51.8%	49.1 – 54.5	77,421
Had a postpartum checkup	88.4%	86.9 – 89.9	132,124

Figure 2. Preconception Health Indicators

### Voices from LAMB Mothers

*"I'm glad to participate and very blessed to have my baby boy And I can't wait for my new baby to arrive. I'm having a girl. Thank you."*

*"I just wanted to comment that I am very happy that we're being taken into account. Thank you for caring about the people especially the women because it is another option for those who do not dare to communicate their family problems such as domestic violence. I hope that with this survey they feel at liberty to communicate if they have some of these problems"*

*"Project is great. Keep doing it."*

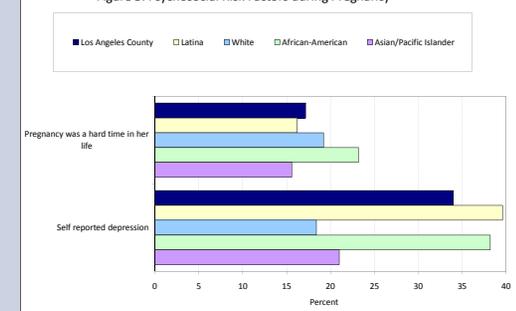

## How are LAMB Data Used?

LAMB identified that only 43% of women were taking a multivitamin before pregnancy and 9% were smoking. Additionally, LAMB found that 40% of pregnancies were unplanned. These data highlight the need to promote healthy life styles for women of reproductive age. Consequently, the **Los Angeles County Preconception Health Collaborative** was developed to promote preconception health. This collaborative developed the Preconception Health Speakers' Bureau, which presented at 6 venues, hosted discussions with national MCAH leaders (CDC and CityMatCH), and are in the process of developing a preconception health data brief. Based on findings from LAMB, the **March of Dimes, Greater Los Angeles Division**, is also in the process of developing a specific forum to promote preconception health among Hispanic/Latino communities.

LAMB demonstrated that only 35% of women achieved ideal weight gain while pregnant. Furthermore, 54% of African American and 43% of Latino women were overweight or obese prior to pregnancy. These data helped the **Healthy Weight for Women of Reproductive Age Action Learning Collaborative** to promote healthy weight before pregnancy among various communities in Los Angeles. In 2008, MCAH developed health messages specific to African American and Latino women and implemented 2 worksite wellness programs.

LAMB demonstrated that 34% of women reported depressed mood during pregnancy. Additional LAMB analyses found that Latino and African American women in Los Angeles are at increased risk for depression during pregnancy. There is evidence of a relationship between a mother's mental health status during pregnancy and poor birth outcomes. These critical findings supported the formation of the **Los Angeles Perinatal Mental Health Task Force (LAC PMHTC)** whose aim is to improve the mental health of women during the perinatal period. Furthermore, LAMB data were used to help LAC PMHTC to secure a grant that would address perinatal depression in LAC.

## Sustainability

2007 LAMB:

- ❖ Funded by MCAH and UCLA/HRSA
- ❖ Multilevel sampling design and expanded focus (Preconception health, stress & resilience, neighborhood environment, racism)
- ❖ Academic-public health partnership, community support

2010 and 2012 LAMB Projects;

- ❖ Funded by first 5 LA
- ❖ Partnership with First 5 LA to evaluate effectiveness of its strategic partners
