HEALTH OFFICER ORDER FOR THE CONTROL OF COVID-19
Public Health Emergency Isolation Order
Revised Order Issued: December 17, 2020
This Order supersedes the October 26, 2020 Public Health Emergency Isolation Order.
This Order is in effect until rescinded by the Health Officer.

WHO IS REQUIRED TO FOLLOW THIS HEALTH OFFICER ORDER
All individuals who reside in the Los Angeles County Health Jurisdiction who have been diagnosed with COVID-19 are required to isolate themselves and follow all instructions in this Order. A person is considered to be diagnosed with COVID-19 based on one or both of the following criteria:

a) They received a positive diagnostic (viral) test for COVID-19 and/or
b) A healthcare provider clinically suspects that they have COVID-19

WHAT YOU ARE REQUIRED TO DO IF YOU HAVE COVID-19
To prevent the spread of COVID-19, the County of Los Angeles Health Officer (“Health Officer”) hereby requires you to immediately:

a) Self-isolate and
b) Tell your close contacts to self-quarantine if you have a positive diagnostic (viral) test for COVID-19 and

c) Follow all instructions in this Order.

INSTRUCTIONS

1) Self-Isolate Until You’re Not at Risk for Spreading COVID-19
You must isolate yourself (stay in your home or another residence and away from others) until you are no longer at risk for spreading COVID-19 (see “Duration of Self-Isolation” below). Until this time, you may not leave your place of isolation or enter any other public or private place, except to receive necessary medical care.

However, if you are a healthcare worker or first responder who does not have symptoms (asymptomatic infection), you may be permitted to return to work if your employer is experiencing critical staffing shortages and must follow return-to-work protocols established by your employer.

When not doing your essential work, you must adhere to this isolation order.

You are required to self-isolate because you can easily spread COVID-19 to others, including people who are at higher risk for serious illness, such as older adults and people with underlying medical conditions.

If you have a positive test, and have not done so already, consider contacting your healthcare provider, clinician advice-line, or telemedicine provider for a medical assessment.

Self-Isolation Instructions: While you are isolating, you are required to follow the “Home Isolation Instructions for People with COVID-19 Infection,” which are available in English, Spanish, and other languages at http://ph.lacounty.gov/covidisolation.
Duration of Self-Isolation:

a) If you tested positive for COVID-19 and have symptoms, you must isolate yourself until:
   - At least 10 days have passed since your symptoms first appeared and
   - At least 24 hours have passed since you have been fever-free without the use of fever reducing medications and
   - Your symptoms have improved.

b) If you tested positive for COVID-19, but never had any symptoms, you must isolate yourself for 10 days after the date that your first positive diagnostic (viral) test was taken. However, if you develop symptoms while you are isolated, you must follow the instructions listed above, in Section (a), for individuals with COVID-19 symptoms who test positive.

c) If a healthcare provider informs you that they clinically suspect you have COVID-19, you must remain in isolation until either:
   - At least 10 days have passed since your symptoms first appeared and
   - At least 24 hours have passed since you have been fever-free without the use of fever reducing medications and
   - Your symptoms have improved.

OR

- The healthcare provider reassesses your diagnosis and concludes that you do not have COVID-19 and
- At least 24 hours have passed since you have been fever-free without using fever reducing medications.

Note: If you are currently in quarantine as a close contact to a person with COVID-19, you must continue to follow the instructions in the self-quarantine order even if you receive a negative COVID-19 test or a healthcare provider concludes that you do not have COVID-19.

2) Tell Your Close Contacts to Self-Quarantine If You Have A Positive COVID-19 Test

If you have a positive diagnostic (viral) test result, you must notify all of your close contacts, as defined below, that they are required to quarantine (stay in their home or another residence and away from others). This is because they have been exposed to COVID-19 and if infected, can easily spread it to others, even if they have no symptoms. While self-quarantined, your contacts may not leave their place of quarantine or enter public or private places, except to receive necessary medical care.

Definition of Close Contact: For purposes of this Order, “close contact” is defined as any of the following people who were exposed to you while you were infectious*:

- A person who was within 6 feet of you for a total of 15 minutes or more over a 24-hour period, or
- A person who had unprotected contact with your body fluids and/or secretions, for example, were coughed or sneezed on, shared utensils or saliva, or provided care without using appropriate protective equipment.

* You are considered to be infectious from 2 days before your symptoms first appeared until the time you are no longer required to be isolated (as described in “Duration of Self Isolation” above). If you have a positive COVID-19 diagnostic (viral) test, but no symptoms, you are considered to be infectious from 2 days before your first positive test was taken until 10 days after that test was taken.
Self-Quarantine Instructions: Your close contacts are required to follow the Los Angeles County “Public Health Emergency Quarantine Order” for COVID-19 and all directions in the “Home Quarantine Instructions for Close Contacts to COVID-19,” which are available in English, Spanish, and other languages at http://ph.lacounty.gov/covidquarantine.

PURPOSE OF THE ORDER

The purpose of this Order is to help slow the spread of Coronavirus Disease 2019 (COVID-19), to protect individuals at higher risk, and to protect the health care system from a surge of cases into its emergency rooms and hospitals. The virus can easily spread between people who are in close contact with one another.

Everyone is at risk for becoming ill, but some people are at higher risk for serious illness (including pneumonia or organ failure) or death due to their age, physical state, and/or health status.

This Order is based upon scientific evidence and best practices, as currently known and available. Isolation and quarantine are recommended by the Centers for Disease Control and Prevention (CDC) and other public health experts as a proven strategy for preventing transmission of COVID-19.

LEGAL AUTHORITY

This County of Los Angeles Health Officer Order is made under the authority of California Health and Safety Code Sections 101040, 101085, 120175, 120215, 120220, and 120225. The Health Officer may take additional action(s), which may include civil detention or requiring one to stay at a health facility or other location, to protect the public’s health if an individual who is subject to this Order violates or fails to comply with this Order.
