

WHAT YOU SHOULD KNOW ABOUT MONKEYPOX IN LA COUNTY

Monkeypox is a rare disease that has recently been reported in California and Los Angeles County.

How is monkeypox spread?

Monkeypox can spread when a person has close contact with a person infected with monkeypox virus or when a person comes in contact with materials (e.g., bedding, towels) that are contaminated with the virus. The monkeypox virus can also spread from animals to people.

The monkeypox virus can spread by:

- Touching monkeypox lesions on a person's skin
- Touching contaminated objects, fabrics (clothing, bedding, towels), and surfaces that have been in contact with someone with monkeypox
- Coming into contact with respiratory droplets or secretions from the eyes, nose and mouth from a person with monkeypox

To prevent the spread of the monkeypox virus, persons should avoid:

- Oral, anal, and vaginal sex, or touching the genitals or anus of someone with monkeypox
- Hugging, massaging, kissing, or talking closely with someone with monkeypox
- Touching shared fabrics, shared surfaces, and objects (e.g. sex toys) used by someone with monkeypox

If you do come in contact with an infected person or animals, wash your hands with soap and water or use an alcohol-based hand sanitizer.
