Think Test Treat TB

Protect your family.
Test for tuberculosis.

Tuberculosis (TB) is one of the world’s leading infectious disease killers.

Without treatment, 1 in 10 people with latent TB infection will get sick in the future.

TB germs can live in your body for years without symptoms. This is called latent TB infection or inactive TB.

Inactive TB can become active anytime and make you sick.

Protect yourself and your family. Ask your doctor about getting tested for TB.
