

# Distemper in Raccoons

## Los Angeles County, August 2014 - April 2015

Between August 2014 and February 2015, 129 cases of raccoons with Distemper were reported (6 confirmed by necropsy with immunohistochemistry testing, 123 suspected based on having oculonasal discharge and/or seizures). Twelve were tested for rabies, and all were negative. Reports of dead and injured raccoons in the area are also shown. Cases were reported by animal control agencies and veterinary practices. Includes data shared by the Long Beach Department of Animal Care Services.
