	of emergency department	of all deaths registered LAC	
Data for week 52 is	visits in week 52, which is	during week 51 which is <i>less then</i>	
incomplete.	<i>less than</i> in week 51.	in week 50.	

#### **Variants**

Of specimens sequenced in week 50\*\* **100%** were Omicron.

Omicron subvariant **BQ.1.1** was detected in **28.4%** of sequenced specimens.

Omicron subvariant **XBB (including XBB.1.5)** was detected in **4.3%** of sequenced specimens. **XBB.1.5** was detected in **<1%** of all sequenced specimens.

LAC DPH prepares this newsletter to summarize current COVID-19 and respiratory illness surveillance data in Los Angeles County. Because the COVID-19 pandemic is evolving rapidly, our methods, systems, and data are being added and revised constantly.

Weekly surveillance data are preliminary and subject to change.

Daily counts of cases and deaths are available on the LAC DPH website at http://dashboard.publichealth.lacounty.gov/covid19 surveillance dashboard/.

<sup>\*\*</sup> The respiratory virus surveillance period starts with MMWR week 40 and runs through week 39 of the following year. The 2022-23 season started on Oct 2, 2022.

<sup>\*</sup> See indicator specific sections for associated methods.

<sup>\*\*</sup> Whole Genome Sequencing results are lagged.

<sup>\*</sup> LAC DPH surveillance data excludes the cities of Long Beach and Pasadena.

### **Virologic Surveillance**

Viral surveillance data is provided by clinical laboratories serving hospitals and healthcare networks across Los Angeles County. Participating laboratories provide the number of positive tests and total number of specimens tested for SARS-CoV2, influenza and respiratory syncytial virus. Data reported from viral surveillance laboratories will differ from the <u>overall county testing data</u> because of differences in the population tested, types of tests used, and changes in the number of laboratories conducting testing over time.

#### SARS-CoV-2 Genomic Surveillance

To track the circulation of SARS-CoV-2 <u>variants</u> in Los Angeles County, DPH receives whole genome sequencing results for specimens collected from Los Angeles County residents. Data presented here come from the LAC DPH Public Health Laboratory, clinical, commercial, and academic laboratory partners. The proportion of cases sequenced varies over time; generally sequencing results are available for 20%-30% of cases. Whole genome sequencing data has a reporting lag time of 2-3 weeks.

100% ■ All other Omicron 90% ■ BA.5 (Excludes BF.7, BA.5.2.6, BQ.1 and BQ.1.1) ■ BA.5.2.6 80% Percent of sequenced specimens ■ BF.7 70% ■ BF.11 60% ■ BN.1 XBB 50% ■ BQ.1 (Excludes BQ.1.1) 40% ■ BQ.1.1 30% BA.4 (Excludes BA.4.6) BA.4.6 20% ■ BA.2 (Excludes BA.2.12.1, BA.2.75 and 10% ■ BA.2.75 (Excludes BA.2.75.2 and BN.1) ■ BA.2.75.2

### **Activity**

# Los Angeles County Emergency Department (ED) Influenza-Like Illness (ILI) and COVID-19 Visits

Public Health's Syndromic Surveillance Project monitors initial self-reported symptoms from patients presenting to participating emergency departments throughout LAC. These symptoms are categorized into different clinical syndromes according to specific code words. Visits are included in the COVID-19 category if the chief complaint field includes any mention of "COVID", "Coronavirus" or similar key words. The syndrome of ILI is defined as mention of influenza; or fever (subjective or measured greater than 100°F) plus cough or sore throat. The ILI and COVID-19 classified ED visits for all ages and by age group are analyzed weekly and year-round. The COVID-19 and ILI categories are not mutually exclusive.

### **Severity**

#### Pneumonia, Influenza and COVID-19 Mortality

Each week, the Office of Health Assessment and Epidemiology at LAC DPH reports the total number of death certificates received and the number of those for which pneumonia, influenza, or COVID-19 (PIC) was listed as the underlying or contributing cause of death by age group.

Figure 10. Pneumonia, Influenza, and COVID-19 Mortality Los Angeles County\*

Data through December 24, 2022, as of January 6, 2023

\*excluding Long Beach and Pasadena

**Technical note:** The number of deaths reported in recent weeks does not represent all deaths that occurred in the reporting period. Data may be incomplete due to a lag between when the death occurred and when the death was registered. Previous weeks counts or percentages may change as vital records are updated with lagged death certificates. The count includes all certificates of deaths (excludes fetal deaths) occurring in the County of Los Angeles (excluding Long Beach and Pasadena) regardless of the residence of the deceased.

### **Angelenos in Action**

#### **Weekly Symptom Survey**

<u>Angelenos In Action</u> is a voluntary text-based public health survey that collects information to monitor COVID-19 symptoms across LA County in real time. Volunteers across LA County provide information on their health as part of a weekly SMS survey. Respondents are assigned to a random day, and then texted once per week about their symptoms. Rates are then calculated weekly.
